Stormwater Management Strategy

Northeast Business Park Pty Ltd is planning to invest \$18 million in stormwater management planning and implementation.

The proposed development design objectives are to recreate riparian and wetland vegetation destroyed by the previous use of the site as a pine plantation. This rehabilitation will involve the creation of:

-  a 100m wide buffer zone to Caboolture River;
-  a 40m wide vegetation buffer to Raff Creek; and
-  a dedicated area of 420 hectares for rehabilitation and revegetation.

If approved, Northeast Business Park will set new benchmarks in terms of Water Cycle Management and Water Sensitive Urban Design, aimed at improving water quality in the Caboolture River.
